Other relevant information

I have been studying evolutionary processes, especially in rodents, since 2007, conducting several projects within this group. I have extensive experience working with morphological variation, model selection and genetic analyzes applied to phylogeography, phylogenetics and species delimitation. In addition, I have extensive experience in generating, processing (bioinformatics), and analyzing genomic data and good skills working with programming languages. I also have a good background working with ecological niche modeling and population demographic history.
